Reading Helps Build Homes

*With BookSmart, Atlanta Habitat for Humanity creates a book-rich environment*

October 2022
BookSmart removes barriers for families to access books in traditionally under-resourced areas.

| Reading and education shouldn’t be limited to school | Linking reading and housing services reaches families and children where they are | Families read more when they are supported and their progress is celebrated |

**Challenge**

Schools are often the only focal point for reading and education

Reading comprehension skills are foundational to learning and are critical contributors to educational outcomes, emotional intelligence, and future earning potential. However, children don’t have sufficient time within the school day to practice reading.

“When we talk about education and how it ties into people's growth and well-being, [Atlanta Habitat for Humanity] is right at the center. Not only are we concentrated on making sure we provide people a safe, quality place to live and a great neighborhood, we’re also tying in other opportunities to help them grow and thrive – and education is one of those elements we help support.” – Alan Ferguson, President and CEO of Atlanta Habitat for Humanity

**Solution**

Worldreader partnered with Atlanta Habitat for Humanity to make reading accessible and fun. Habitat for Humanity’s model asks new homeowners to play an active role in making their dream of owning a home a reality. Since the organization’s founding in 1976, future homeowners and volunteers have worked side-by-side to build affordable homes. This investment into their home and community is called ‘sweat equity’ and can take many forms. To fulfill the requirement of 250 sweat equity hours, families can contribute to the construction of their new home, work at the Habitat ReStore or warehouse, or attend classes on anything from home maintenance to personal finance.
With the BookSmart digital reading solution, Atlanta Habitat for Humanity introduced a new way for future homeowners to put sweat equity into their homes: completing reading hours with their children. Participating families accessed digital books and activities that helped them support and track their children’s reading journey at home.

A library of digital books: BookSmart provided parents with more than 1400 books in English, Spanish, and Ukrainian for children aged 3-12 and their families. This summer, BookSmart allowed families to earn rewards for reading five, ten, and 30 books, as well as provided engaging activities with each book for children and their caregivers to complete together. BookSmart automatically tracks reading progress, and offers engaging activities to extend children’s learning with each book.

Direct access to families’ home environments: Program leaders sent information to each family about how to access BookSmart and how reading would contribute to earning sweat equity. BookSmart proved particularly effective as Covid limited external engagement, allowing families to complete some of their sweat equity hours right in their new home. BookSmart continues to be used as the books are always available and families find reading together is valuable bonding time between caregiver and child.

A meaningful partnership across sectors: Habitat for Humanity’s affordable housing structure can be and is an anchor in the community ecosystem. BookSmart brought reading access directly to residents, creating an onsite book-rich environment while eliminating the need for transportation or costs to access books.

**Partnership Goals**

Worldreader and Atlanta Habitat for Humanity had short-term and long-term goals to boost children’s reading time and completion of learning activities by families.

<table>
<thead>
<tr>
<th>Short-term goal</th>
<th>Long-term goal</th>
</tr>
</thead>
<tbody>
<tr>
<td>Change reading behaviors for children in the home setting by providing direct access to a multitude of books.</td>
<td>Increase the number of families active in reading to their children and in the program and increase the time existing families spend reading, and completing the accompanying activities.</td>
</tr>
</tbody>
</table>
Results

"BookSmart is a good fit [for a partnership] because when Covid hit, everything went virtual. Using Booksmart meant families were able to get sweat equity hours in their homes and it fits in well with our youth initiatives of building education for youth and families." - Jacolvy, Family Services Education Manager, Atlanta Habitat for Humanity

Reach

The partnership launched in South Fulton County in Atlanta, Georgia. Families from Habitat for Humanity’s affordable housing communities were invited to join the project. Most of these families are first-time home buyers below 80% Area Median Income (AMI).

In total, this project:
- Reached 32 readers
- Read 468 books
- Engaged young readers in 110 activities
- Earned families 13 cumulative sweat equity hours

On average, each family completed:
- 11 books over the summer
- 11 minutes of reading per day

Responses

“The program has been a joy for both me and my son and we both get to spend time together. My son loves to do the activities and it has been great to earn sweat equity hours and spend time with him at the same time.” – Jasmine, Atlanta Habitat for Humanity homeowner
Here, Carmello is reading from the BookSmart digital library with his mom, Jasmine. By reading together, Jasmine helps Carmello interact with the book’s content by asking questions about what he would do in certain situations. Children can learn from the experiences that characters go through, which improves their behavioral and social-emotional development. For example, Jasmine and Carmello discussed what he should do if he makes a mistake like one of the characters in the story. Jasmine spent quality time with her son and earned sweat equity hours at the same time.

**Future Plans**

*We will foster ongoing reading opportunities to engage young readers.*

This initial partnership was just the start. In May 2023, Worldreader will launch another reading challenge. Based on our learnings from 2022, we’ll start once children are out of school for the summer, using a more robust communications plan with families and a new incentive structure. We aim to reach more families and encourage them with progressive target levels: 5, 15, and 30 books. With these changes, we expect to see more books read, more learning for children and more sweat equity hours completed for parents.

**Partnerships that draw from each organization’s strengths are the most successful for long-term growth**

To make this project a success, Worldreader contributed its digital reading solution, BookSmart, and our experience with inspiring community-led reading and education. Atlanta Habitat for Humanity provided local expertise and the structure for reaching families in their homes. This partnership demonstrated that a collaborative relationship with similarly value-driven organizations can be mutually beneficial and open new opportunities to promote reading and education.
